ABSTRACT

The objective of this study is to determine if a relationship exists between financial development and economic growth for three CARICOM countries, Barbados, Jamaica and Trinidad and Tobago and, provided that a relationship is found, to determine the nature and extent of the relationship. The investigation is carried out within a VAR/VECM framework on three countries, Barbados, Jamaica and Trinidad and Tobago, over the period 1970 – 2002. Some evidence is found causality in both directions - from financial development to economic growth, as well as from economic growth to financial development – but there is also evidence that the result may be perverse in that particular forms of financial development may result in lower growth rates. Policy recommendations are made.

JEL CLASSIFICATION NUMBERS: C22, G20, O16

KEYWORDS: Financial development, growth, causality, VAR models, VECM models.
