

The Role of the Engineering in Planning

W.G. Demas

Permanent Secretary, Ministry of Planning and Development
Trinidad and Tobago, West Indies

Abstract: *In modernising countries, the engineer has an important role to play in the general society and in economic planning and decision-making. This paper discusses such role from four parts. These are 1) the training of engineers, 2) the role of the engineer in business decision-making, 3) the role of the engineer in national economic decision-making, and finally, 4) the role of the engineer in technological research.*

Keywords: *Engineer, role, economic planning, business decision-making*
