

The background of the slide is composed of four panels of electron micrographs. The top-left and bottom-right panels show green, filamentous structures, likely representing Dengue virus particles. The top-right and bottom-left panels show orange, spherical particles with a textured surface, likely representing Chikungunya virus particles. The central text is overlaid on a white rectangular area.

Research Seminar
**Characterization of Dengue and
Chikungunya virus infections amongst
patients presenting with acute
undifferentiated febrile illnesses**

Nikita Sahadeo
(PhD Molecular Genetic candidate)

Date: Wednesday 25th February, 2015

Anatomy Teaching Lab, Building 34 (Ground Floor),
Department of Preclinical Sciences, EWMSC.
