MANUSCRIPTS IN PREPARATION FOR PUBLICATION

Social Measurement in Caribbean Societies – Alternative Paradigms

This is due principally to the dearth of processes reinforcing the importance, relevance and impact that social measurement processes can have upon the determination of outcome associated with Caribbean social structures. Over the years, I have been researching, writing and making pronouncements on numerous concerns that promote social measurement as a critical decision-making process impacting upon
social development. This should culminate in a book entitled **Social Measurement in Caribbean Societies – Alternative Paradigms**. It will examine the following main themes.

- Social Measurement – Relevance and Impact
- Social Measurement – Past and Contemporary Status
- Census-Taking in the Caribbean – A Critical Evaluation
- Social Indicators in the Caribbean – Practical Experiences and Approaches
- Domestic Violence in the Caribbean - Toward Measuring Incidence and Prevalence.
- Measuring Youth Empowerment – Challenges Facing the Caribbean.
- Measuring Social Vulnerability – Methodological Considerations.
- Social Measurement, Caribbean Societies and the New Millennium.

**Manual of Demographic Analysis for the Caribbean (with Chukwudum Uche)**

This book seeks to introduce statisticians, demographers, students and other professionals to technical issues that arise in the context of analyzing data pertaining to populations such as those in the Caribbean. The focus is primarily upon the use of principles akin to formal demography and indirect techniques that instrumental in the generation of critical demographic data and the solution of common demographic challenges that arise among practitioners operating in different spheres. The content of the book will hinge upon the authors’ long experience teaching demographic techniques to different audiences or more recently, their facilitation of a series of workshops commissioned under the auspices of CARICOM and the Caribbean Development Bank to meet to strengthen capabilities with regard to demographic analysis in the Caribbean Region. The main chapter headings include the following:

**Sources of Demographic Data**

- Evaluating the Quality of Demographic Data
- Mortality Measures
- Life Table Analysis
- Fertility Measures
- Nuptiality Measures
- Migration Measures
- Stable Populations and Model Life Tables
- Indirect Techniques
- Population Estimates and Projections
